Interactive Symposium on Research & Innovation for Connected and Automated Driving in Europe

28-29 April 2020

Messukeskus Helsinki

The second Interactive Symposium on Research & Innovation for Connected and Automated Driving in Europe will take place at the Transport Research Arena conference (TRA2020) in Helsinki, Finland. EUCAD2020 is the continuation of previous EUCAD events, including the 2017 and 2019 EUCAD conferences as well as the EUCAD 2018 Symposium.

The event will facilitate in depth discussions around specific topics for Research & Innovation in Connected and Automated Driving that are complementary to the TRA Conference sessions, in a three-hour workshop format. Two tracks of two sessions running in parallel will be organised in the afternoon of both 28 and 29 April 2020.

Each workshop will focus on "hot topics" related to the main challenge areas for CAD development and testing in Europe and beyond. The main purpose of the event is to allow for an interactive debate between the invited panellists and the audience around key R&I questions and the way forward.

The Symposium is organised by the ARCADE* initiative and supported by the European Commission Directorate General for Research & Innovation (RTD) as well as the ERTRAC European Technology Platform. It is targeted at public and private stakeholders in road transport, interested in exchanging views on immediate next steps and future actions required for connected and automated mobility.

Participation in the Symposium is only open to registered participants of TRA. More information and registration details will soon be available at https://connectedautomateddriving.eu. Please STAY TUNED and follow us:
